No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads to Lyme disease.

These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads to Lyme disease.

These resources against Borrelia infection, which is spread by ticks and to Lyme disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Compositions of OspC polypeptides from strains of Borrelia which cause Lyme disease are used to immunize animals and detect immune responses to Lyme disease -

                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads

                                                                                                                                                                                                                                                      The present invention provides compositions comprising ospC proteins and chimeric ospC proteins from members of the Borrelia genus. These may be Borrelia burgdorferi, B. afzelli or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads

The present invention provides compositions comprising ospC proteins chimeric ospC proteins from members of the Borrelia genus. These may Borrelia burgdorferi. B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and lea

leads

and

as leads

vaccines to Lyme d

disease.

These may be Borrelia burgdorferi, B. afzelii or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leads to Lyme disease.

These may Borrelia burgdorferi, B. afzelli or B. garinii. These can be used as vaccines against Borrelia infection, which is spread by ticks and leat to Lyme disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 43;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Compositions of OspC polypeptides from strains of Borrelia which cause Lyme disease are used to immunize animals and detect immune responses
